Education

Universidad de Margarita, BS, Systems Engineering – Margarita, Venezuela

Sept 2022 – July 2026

- Relevant Coursework: Data Structures & Algorithms, Advanced Database Systems, Operating Systems, Computer Networks, Software Development Methodologies

Experience

Colegio Guayamuri, Backend Software Engineer (Contract) – Nueva Esparta, Venezuela

May 2026 – present

- Designed and developed the backend and DevOps infrastructure for a centralized faculty evaluation platform using **Python**, **FastAPI**, **PostgreSQL**, and **TypeScript/React**, streamlining performance reviews for 100+ teachers across 9 core institutional users
- Built custom analytical reporting endpoints capable of generating downloadable PDF and Excel reports, enabling the School Director and 6 department evaluators to track individual and global performance metrics across academic periods
- Configured secure JWT authentication and strict rate-limiting on high-sensitivity evaluation submission endpoints, ensuring data integrity and tamper-proof scoring
- Engineered **CI/CD** pipelines via **GitHub Actions** and Railway with automated integration tests, formatting checks, and strict PR branch protection rules, reducing merge regressions by **40%** and cutting deployment times by **50%**

Colegio Guayamuri, Software Engineering Intern – Nueva Esparta, Venezuela

Nov 2025 – Apr 2026

- Architected and deployed a full-stack REST API admissions platform using **Python**, **FastAPI**, **React.js**, and **PostgreSQL**, replacing a manual spreadsheet workflow and increasing application processing capacity by **33%** within 4 months
- Implemented **role-based access control (RBAC)** and JWT authentication for 8 administrative staff members, eliminating unauthorized data editing across departments while integrating email notifications to coordinate applicant interviews.
- Containerized services using **Docker Compose**, managed **AWS S3** storage and automated .sql database backups, and enforced **GitHub Actions CI/CD** PR testing rules to block failing merges, reducing production defects by **35%**
- Engineered endpoint rate-limiting on public-facing application forms and administrative authentication routes to mitigate abuse and secure sensitive student information

Projects

E-Commerce ETL Pipeline

July 2026 – July 2026

Modular data ingestion and transformation pipeline

- Architected a modular end-to-end **ETL** pipeline in **Python** to automatically extract, clean, and structure raw e-commerce product data into standardized schemas for downstream analysis
- Engineered data transformation scripts with robust error handling and data validation, streamlining the extraction of complex product attributes and pricing metadata

Static Site Generator

June 2026 – June 2026

Object-oriented Markdown-to-HTML compilation tool

- Built a custom Markdown-to-HTML static site generator from scratch in **Python**, leveraging object-oriented programming (OOP) principles to parse block- and inline-level syntax into an HTML tree structure
- Implemented recursive directory-tree traversal algorithms to dynamically process hierarchical source folders and Markdown documents into production-ready HTML pages

Skills

Programming Languages: Python, JavaScript, TypeScript, SQL, HTML/CSS

Frameworks & Libraries: FastAPI, React.js

Infrastructure & DevOps: PostgreSQL, Docker, Docker Compose, AWS (S3), Cloud Computing, Git, Linux, CI/CD

Core Competencies: REST API Development, Agile Methodologies, Database Design, Full-Stack Development

Languages: Spanish (Native), English (C2 - Fluent)
